

CANNABIS

The name of a plant - unfortunately often misused - has been chosen for this new Omexco range of natural wallcoverings.

Paper strips are being coloured, then hand-woven by craftsmen on ancient looms. After that, the paper weave is being glued on a non-woven backing.

This non-woven backing makes the wallcovering supple, stable, and therefore easy to install : the ready made PVA or EVA adhesive can be applied directly to the wall - no need to humidify the back of the wallcovering.

Special attention has been given to the light resistance of the wallcovering. All colours obtained a result of at least 5 to the Xenotest.

The colours of Cannabis vary from tender yellow, cream, straw, pastel green, to stronger and more "spicy" colours like havana, rust colour, sienna...

The collection comprises 4 different weaves, in total 28 references, sometimes woven in one single colour, sometimes in different shades of one colour, sometimes in two contrasting colours.

The wallcovering is +/- 91 cm wide and is sold cut length (no minimum order).
