

DISCO

The new Omexco collection of non-woven wallcoverings invites you to join the dance... Whirling retro designs, metallic reflections that sparkle like disco ball lamps, cheerful and scintillating colours. Let the party begin...

Two different products complement each other in harmonious shades of bronze, gold, purple, copper, silver, red, anthracite, brass, aquamarine, pearl... :

- non-woven wallcoverings (6 different designs), 1m wide, fire resistant, with marine certificate, ecological, washable. These wallcoverings have a good light resistance, are easy to install (glue on the wall, no need to humidify the backing of the product) and are available cut length (no minimum order). Custom colouring is available on request.
- a novelty : embossed mica wallcoverings (width 92 cm). The light embossing gives a completely different aspect to a product, which has been known for a long time. Mica or “vermiculite” is a mineral formed out of chemical reaction between quartz and granite. Exposed to extreme heat, the mineral expands into worm-like pieces of 2000 or even 3000 % of their original size, in a spectrum of brilliant colours. The characteristics of this mineral have been known in Japan for 6 centuries. Other names for mica are “strange stone”, “breathing stone”, “miracle stone”. After the mica has been heat-expanded, it is crushed into small pieces and stuck on a non-woven backing. Finally, the surface is coloured and embossed. The mica-wallcovering has a good light resistance, is easy to install thanks to the non-woven backing, is ecological, meets most international fire standards and is available cut length (no minimum order).
