

## PAPERWEAVE II

Paper fibres are made into strips which are coloured in very rich and warm tones and woven by craftsmen according to traditional methods.

Special attention has been paid to the light resistance. All colours obtained a result of at least 5 on the light resistance Xenotest.

The paper fibres have a non-woven backing which makes the wallcovering very supple, dimensionally stable and easy to hang.

The matching fabrics are 100% linen. The special finish gives the fabrics a natural and pre-creased look, but also a soft and very pleasant touch. It makes the fabrics supple, thanks to which the curtains hang very nicely.

There are 28 different references of wallcoverings and 11 different colours of matching fabrics. Wallcovering (90 cm wide) and fabrics (150 cm wide) are delivered cut length.
